

PROJECT SYNOPSIS

Resume Builder

Frontend Development Project

1. Introduction

Resume Builder is a single-page web application developed to make the process of creating a professional resume simple and beginner-friendly. The application allows users to enter their personal, educational, skill, project, and experience details and displays the information in a properly structured resume on the same webpage.

2. Problem Statement

Creating a professional resume can be difficult for beginners because of formatting problems, lack of proper resume structure, the time required for designing, and difficulty in organizing information. The project aims to solve these problems by providing a simple and organized interface for resume creation.

3. Objectives

- Make resume creation simple and beginner-friendly.
- Reduce the time required to create a resume.
- Provide a clean and professional layout.
- Practice frontend development concepts.
- Display all resume information on a single webpage.

4. Technologies Used

- **HTML:** Used to create the structure, forms, and resume sections.
- **CSS:** Used for styling, layout, fonts, spacing, and responsive design.
- **JavaScript:** Used to take user input, process the information, and dynamically display the resume.

5. Main Features

- Personal Information
- Education Details
- Skills
- Projects
- Experience
- Resume Preview
- Simple and user-friendly interface

6. Working of the Project

User Input → JavaScript Processing → Resume Display

- 1 The user enters their resume information.
- 2 JavaScript collects and processes the entered information.
- 3 The information is dynamically displayed in the resume format.
- 4 All the information is handled within a single webpage.

7. Advantages

- Easy to use
- Beginner-friendly
- Saves time
- Clean interface
- Easy to edit
- No need to switch between multiple webpages

8. Future Scope

- Download Resume as PDF
- Multiple Resume Templates
- AI-based Resume Suggestions
- Resume Data Storage
- ATS Resume Checker
- Dark/Light Mode

9. Conclusion

The Resume Builder is a simple and useful frontend web application that makes resume creation easier and more organized. Through this project, concepts such as HTML, CSS, JavaScript, DOM Manipulation, Form Handling, and Webpage Designing were applied practically.

Project Statement: The Resume Builder provides a simple, user-friendly platform where users can enter their details and generate a clean, professional resume on a single webpage.
